Device Intended Purpose	The Chromsystems assay "Catecholamines in urine" is an in vitro diagnostic medical device designed for professional users in clinical laboratories for the quantitative determination of noradrenaline (syn. norepinephrine), adrenaline (syn. epinephrine), and dopamine in human urine samples. Sample preparation is carried out manually, and analytic separation is done via high performance liquid chromatography with electrochemical detection (HPLC-ECD). The assay is intended to be used for patients in whom the urinary levels of noradrenaline, adrenaline and dopamine are of clinical importance, primarily as an aid to diagnosis and monitoring of suspected pheochromocytoma and paraganglioma.
