Device Intended Purpose	The manual reagent test kit "***MassChrom*® Free Metanephrines in plasma**" is an in vitro diagnostic medical product designed for professional users in clinical laboratories to quantitatively determine free metanephrine, free normetanephrine and free 3-methoxytyramine in human plasma samples through liquid chromatography with tandem mass spectrometry (LC-MS/MS). The test kit is intended to be used for patients in whom the plasma levels of free metanephrine, free normetanephrine and free 3-methoxytyramine are of clinical importance, primarily as an aid to diagnosis and monitoring of suspected pheochromocytoma or paraganglioma. Furthermore, the kit is intended to be used for patients in whom the plasma levels of free 3-methoxytyramine, or free 3-methoxytyramine in combination with free normetanephrine, are of clinical importance as an aid to diagnosis and monitoring of suspected neuroblastoma.		
Risk Class	C, as per EU Regulation 2017/746, Annex VIII, Rule 3 (h)		
GMDN Code	63892 "Multiple biogenic amine neurotransmitter IVD, kit, liquid chromatography/mass spectrometry (LC/MS)"		
Notified Body	TÜV Süd Product Service GmbH Ridlerstraße 65, 80339 Munich, Germany	Identification No.	0123
Conformity Assessment	Conformity assessment based on a quality management system and on assessment of technical documentation - Annex IX		
Declarations This EU declaration of conformity is issued under the sole responsibility of the manufacturer. The devices that are covered by the present declaration are in conformity with the In-Vitro Diagnostic Medical Devices Regulation (2017/746/EU) (IVDR).			
Following Common Specifications were considered as part of determining device conformity with the IVDR: Not applicable as no Common Specifications exist for the concerned device.
